● Analysis has shown that the radiant heat produced by the Gas Radiantfire is as near like the radiant heat from the sun as it is possible for science to achieve in the gas burning field. Thus, by installing a Gas Radiantfire, one may to a very great extent offset the lack of sunlight in the winter months and aid the development of a sustained vitality which will resist the ailments so common during that period because of this lack of sunlight. When you turn on a Gas Radiantfire, you virtually "turn on the sun."
